

Superior Clamping and Gripping

## Product data sheet

Long-stroke gripper PHL

## Flexible. Precise. Powerful.

### Long-stroke gripper PHL

2-finger parallel gripper with long jaw stroke for large parts and/or a broad range of parts

#### Field of application

Optimum standard solution for many fields of application. Universal application in clean and slightly dirty surroundings in machine building and plant building industry, assembly and handling as well as automotive industry.

#### Advantages – Your benefits

**High maximum moments possible** suitable for using long gripper fingers

**Double piston rack and pinion principle** for centric clamping

**Fastening at one gripper side in two screw directions** for universal and flexible gripper assembly

**Air supply via hose-free direct connection or screw connections** for flexible pressure supply in all automated systems

**Comprehensive sensor accessory program** for versatile querying possibilities and stroke position monitoring

**Stroke versions** for highest flexibility

Sizes  
Quantity: 5

Weight  
1.64 .. 26.47 kg

Gripping force  
500 .. 4630 N

Stroke per jaw  
30 .. 160 mm

Workpiece weight  
2.5 .. 15.5 kg

## Functional description

By pressure actuation of the opposing piston, the base jaws are guided by a carrier on the piston, and are set in motion. The synchronization of the jaw stroke is done with a rack and pinion principle.

- ① **Base jaw**  
for the connection of workpiece-specific gripper fingers
- ② **Housing**  
is weight-optimized due to the use of high-strength aluminum alloy
- ③ **Roller guide**  
highly loadable, nearly backlash-free base jaw guidance for long finger lengths
- ④ **Kinematics**  
pinion and rack principle for centric clamping, even at large strokes
- ⑤ **Dust cover**  
along the whole guidance length against coarse dirt
- ⑥ **Sensor system**  
Brackets for proximity switches and adjustable control cams in the housing

## General notes about the series

**Operating principle:** Double piston rack and pinion principle

**Housing material:** Aluminum (extruded profile)

**Base jaw material:** Aluminum alloy, anodized

**Actuation:** pneumatic, with filtered compressed air as per ISO 8573-1:2010 [7:4:4].

**Warranty:** 24 months

**Scope of delivery:** Gripper in the ordered variant, accessory kit (centering sleeves, O-rings for direct connection/detailed contents see operating manual) and safety information. Product-specific instructions can be downloaded at [schunk.com/downloads-manuals](http://schunk.com/downloads-manuals).

**Gripping force maintenance:** possible by using the version with mechanical gripping force maintenance or pressure maintenance valve SDV-P

**Gripping force:** is the arithmetic sum of the individual force applied to each jaw at distance P (see illustration).

**Finger length:** is measured from the reference surface as the distance P in direction to the main axis.

The maximum permissible finger length applies until the nominal operating pressure is achieved. With higher pressures, the finger length must be reduced proportionally to the nominal operating pressure.

**Repeat accuracy:** is defined as a distribution of the end Position for 100 consecutive strokes.

**Workpiece weight:** is calculated for force-fit gripping with a coefficient of static friction of 0.1 and a safety factor of 2 against workpiece slippage at acceleration due to gravity g. For form-fit or capture gripping, there are significantly higher permissible workpiece weights.

**Closing and opening times:** are movement times of the base jaws only, without application-specific gripper fingers. Valve switching times, hose fill times, or PLC reaction times are not included, and are to be considered when cycle times are calculated.

## Application example

Flexible and cycle-time-optimized handling of prismatic battery cells during the assembly of battery modules. The PHL long-stroke gripper handles cell formats of various dimensions. By using the PPD pneumatic positioning unit, the gripper fingers can be pre-positioned cell-specifically to save cycle time and avoid collisions in narrow deposit positions when opening the gripper fingers.

- ① Pneumatic positioning device PPD
- ② 2-finger long-stroke gripper PHL
- ③ Inductive analog position sensor BIP

## SCHUNK offers more ...

The following components make the product even more productive – the suitable addition for the highest functionality, flexibility, reliability, and controlled production.

Quick change system

Universal swivel unit

Pressure maintenance valve

Universal intermediate jaw

Inductive proximity switch

Magnetic switches

Finger blank

Jaw quick-change system

① For more information on these products can be found on the following product pages or at [schunk.com](https://www.schunk.com).

## Options and special information

**Mechanical gripping force maintenance:** ensures a minimum gripping force in the event of a pressure loss. This acts as the closing force in the S version. The design of the top jaws means that they can also be used as an opening force.

**Additional stroke versions:** available in three stroke variants as standard

**Additional versions:** Various options can be combined with each other. Numerous additional options are also available – just tell us what your task is!

**Food-grade lubrication:** The product contains food-compliant lubricants as standard. The requirements of standard EN 1672-2:2020 are not fully met. The relevant NSF certificates are available at <https://info.nsf.org/USDA/Listings.asp> using the lubricant information in the operating manual. Components such as rolling bearings, linear guides, or shock absorbers are not provided with food-compliant lubricants.

### Gripping force

### Dimensions and maximum loads

① The indicated torques and forces are static values, apply for each base jaw, and may occur simultaneously.

## Main view

The drawing shows the gripper in the basic version with closed jaws, without dimensional consideration of the options described below.

① The SDV-P pressure maintenance valve can be used as a gripping force maintenance device (see catalog section on accessories).

A, a Main / direct connection, gripper opening

B, b Main / direct connection, gripper closing

① Gripper connection

② Finger connection

⑦ Fit for centering sleeves

⑧ Depth of the centering sleeve hole in the counter part

⑨ Min. six screws per base jaw

## Maximum permitted finger projection

■ Permitted range

■ Inadmissible range

$L_{\max}$  is equivalent to the maximum permitted finger length, see the technical data table.

### Hose-free direct connection M4

③ Adapter

④ Grippers

The direct connection is used for supplying compressed air without hoses. Instead, the pressure medium is fed through bore-holes in the mounting plate.

### Stroke version PHL 25-045

The drawing shows changes in dimensions of the version with a different stroke compared to the version shown in the main view.

### Stroke version PHL 25-060

The drawing shows changes in dimensions of the version with a different stroke compared to the version shown in the main view.

### Gripping force maintenance S

⑨⑩ Piston chamber with spring

⑨① Piston chamber without spring

⑨② Direction of force of the pressure springs

The mechanical gripping force maintenance ensures a minimum clamping force in the event of a pressure drop. This acts as the closing force in the S variant. The design of the top jaws means that they can also be used as an opening force. Besides this, the gripping force maintenance can be used to increase the gripping force.

① The gripper is shown in the basic position, closed by springs.

## SDV-P pressure maintenance valve

④ Grippers

⑨⑩ SDV-P pressure maintenance valve

The SDV-P pressure maintenance valve ensures in emergency STOP situations that the pressure in the piston chamber of pneumatic gripper, swivel, linear, and quick-change modules is temporarily maintained.

Description	ID	Recommended hose diameter [mm]
<b>Pressure maintenance valve</b>		
SDV-P 04	0403130	6
SDV-P 07	0403131	8
<b>Pressure maintenance valve with air bleed screw</b>		
SDV-P 04-E	0300120	6
SDV-P 07-E	0300121	8

① In order to achieve the specified closing and opening time for each gripper variant, the recommended hose diameter must be used. The direct allocation of the respective variant of the gripper for the respective SDV-P can be found at [schunk.com](http://schunk.com).

## Pneumatic positioning device PPD

The PPD allows flexibility in all applications with pneumatic grippers through free positioning, gripping force and speed adjustment.

Description	ID	
<b>Pneumatic positioning device</b>

Assembly set PPD	1540705	

① In addition to the PPD, a position sensor (SCHUNK IO-Link sensor or analog sensor (4...20 mA)) is required.

## Intermediate jaw interface

④ Grippers

⑨⑩ Customized gripper fingers

⑨⑩ Uniform screw connection pattern

By using the intermediate jaw, you have the possibility of directly connecting a wide range of accessories directly. This includes jaw quick-change systems, finger blanks, and universal intermediate jaws.

ZBA PHL 25-100 intermediate jaw

- ② Finger connection
- ⑦② Fit for centering sleeves
- ⑤⑥ Included in the scope of delivery
- ⑧⑩ Depth of the centering sleeve hole in the counter part

Optionally intermediate jaws can be used, enabling direct connection and alignment of top jaws and various standard accessories in Z-direction.

Description	ID	Material	Finger interface	Scope of delivery

[illegible]

⑧⑩ Depth of the centering sleeve hole in the counter part

Technical drawing of a mechanical part, showing a top view and a side view.

The top view is a square with four circular holes, one in each corner. The side view shows a vertical rectangular block with a horizontal flange at the bottom. Dimension lines indicate the width 'Y' and height 'Z'.

$L^{\max}$  is equivalent to the maximum permitted finger length, see the technical data table.

### Hose-free direct connection M5

③ Adapter

④ Grippers

The direct connection is used for supplying compressed air without hoses. Instead, the pressure medium is fed through bore-holes in the mounting plate.

### Stroke version PHL 40-100

The drawing shows changes in dimensions of the version with a different stroke compared to the version shown in the main view.

### Stroke version PHL 40-075

The drawing shows changes in dimensions of the version with a different stroke compared to the version shown in the main view.

### Gripping force maintenance S

⑨0 Piston chamber with spring

⑨1 Piston chamber without spring

⑨2 Direction of force of the pressure springs

The mechanical gripping force maintenance ensures a minimum clamping force in the event of a pressure drop. This acts as the closing force in the S variant. The design of the top jaws means that they can also be used as an opening force. Besides this, the gripping force maintenance can be used to increase the gripping force.

① The gripper is shown in the basic position, closed by springs.

## SDV-P pressure maintenance valve

④ Grippers

⑨⑩ SDV-P pressure maintenance valve

The SDV-P pressure maintenance valve ensures in emergency STOP situations that the pressure in the piston chamber of pneumatic gripper, swivel, linear, and quick-change modules is temporarily maintained.

Description	ID	Recommended hose diameter [mm]
Pressure maintenance valve		
SDV-P 07	0403131	8
Pressure maintenance valve with air bleed screw		
SDV-P 07-E	0300121	8

① In order to achieve the specified closing and opening time for each gripper variant, the recommended hose diameter must be used. The direct allocation of the respective variant of the gripper for the respective SDV-P can be found at [schunk.com](http://schunk.com).

## Pneumatic positioning device PPD

The PPD allows flexibility in all applications with pneumatic grippers through free positioning, gripping force and speed adjustment.

<b>Assembly set</b>		
Assembly set PPD	1540705	

- ① In addition to the PPD, a position sensor (SCHUNK IO-Link sensor or analog sensor (4...20 mA)) is required.

### Intermediate jaw interface

- ④ Grippers
- ⑨⑩ Customized gripper fingers
- ⑨① Uniform screw connection pattern

By using the intermediate jaw, you have the possibility of directly connecting a wide range of accessories directly. This includes jaw quick-change systems, finger blanks, and universal intermediate jaws.

ZBA PHL 63-300 intermediate jaw

- ② Finger connection
- ⑦② Fit for centering sleeves
- ⑤⑥ Included in the scope of delivery
- ⑧① Depth of the centering sleeve hole in the counter part

Optionally intermediate jaws can be used, enabling direct connection and alignment of top jaws and various standard accessories in Z-direction.

Description	ID	Material	Finger interface	Scope of delivery

Attachment kit for proximity switch IN 80

End position monitoring can be mounted with an attachment kit.

Description	ID	
Attachment kit for proximity switch		
AS-PHL 63-IN80	1485818	

- ① This attachment kit needs to be ordered optionally as an accessory.

IN 80 inductive proximity switches

End position monitoring can be mounted with an attachment kit.

Description	ID	Often combined

IN 80-S-M8	0301478	●
INK 80-S	0301550	

- ① Two sensors (closer/S) are required for each unit and extension cables are available as an option. This attachment kit needs to be ordered optionally as an accessory. For sensor cables, note the minimum permissible bending radii. These are generally 35 mm.

## Electronic magnetic switch MMS

- 17 Cable outlet  
90 MMS 22 sensor  
91 Sensor MMS 22...-SA

End position monitoring for mounting in the C-slot.

- ① Two sensors are required per unit for monitoring two positions. On option, extension cables and sensor distributors are available. Additional product variants of the sensor, and further information and technical data can be found in the catalog chapter sensor system.

## Programmable magnetic switch MMS 22-PI1

- 17 Cable outlet  
90 Sensor MMS 22 PI1-...  
91 Sensor MMS 22 ...-PI1-...-SA

Position monitoring with one programmable position per sensor and integrated electronic system in the sensor. Can be programmed using MT magnetic teaching tool (included in the scope of delivery, ID 0301030) or ST plug teaching tool (optional). End position monitoring for mounting in the C-slot. If the ST plug teaching tools are listed in the table provided, teaching is only possible with the ST teaching tools.
